SACRIFICIAL VELCRO PADS

The biggest enemy of hook and loop sanding systems is the heat caused by friction which weakens the nylon hooks. I have thrown away many Velcro disc holders (about \$10.00 per holder) because of over aggressive sanding techniques. Solution - a sacrificial sanding pad between your sandpaper and the disc holder. You'll need a piece of hook and loop with the adhesive backs and stick them together back to back and cut the pieces to the size of your sanding pad holder. Now when you ruin a

hook because of friction you can throw away something worth a few cents.

Check out: <http://www.supergrit.com/> at the bottom of page 39 in their online

catalog are both products in rolls for \$2.00 per foot. Don't forget you need one of each.
